

Dear Customers,

the inauguration of our new plant in Noventa di Piave (VE) was a success with over 70 users of glass-lined equipment visiting our facilities.

In May we had also the opportunity to show the quality and potential of 3V TECH during the trade fair ACHEMA 2009.

With this communication we want to renew our commitment and interest in a continuous and important technological development.

3V Tech Group invested over 7m euros in the glass-lined industry to have a forefront plant with last-generation machineries and equipment and to develop an advanced research program.

Our R&D allowed us to develop glasses and technologies with surprising features, tested by official organisations and important companies. We can proudly say that our products are already in the vendor lists of companies such as Bayer, Ciba, Novartis and Basf.

A negative cycle of investments and the hard competition we are facing, can only improve our commitment and motivation to win this challenge.
